RULE 131 AFFIDAVIT

This affidavit is being submitted in the above-captioned application to overcome the rejection of claims 1-57 under 35 U.S.C. § 103(a) that the claimed invention is obvious in view of Allison (WO 01/35997). The Allison reference indicates that it was published on May 25, 2001 and filed on November 17, 2000. As demonstrated below, I conceived my invention prior to May 25, 2001, the earliest effective date of the Allison patent and, thereafter, worked diligently on reducing the invention to practice at least through and until I filed the above-captioned application.

My invention is generally directed to a method in which photodynamic therapy (PDT) is employed to inhibit, stabilize or reduce occlusions within the cardiovascular system of the body. The method involves activation of a photosensitizer drug for treatment of cardiovascular occlusions using wavelengths of light in the 390-610 nm range to improve efficacy and safety over previous approaches. Through the use of the 390-610 nm range, there is minimal surrounding tissue damage and simultaneously a very significant PDT effect is

achieved within the vessel that is the target of the treatment. Embodiments of my method are recited in independent Claims 1 and 57.

Attached hereto as Exhibit 1 is a copy of portions of a Drug Screening Report prepared at my direction, which describes and documents the reduction to practice of my invention, which occurred in the United States prior to both May 25, 2001 and November 17, 2000. The Drug Screening Report arose out of experiments conducted at my direction and demonstrates the efficacy of the various photosensitizer compounds that were examined using wavelengths of light in the 390-610 nm range. The Drug Screening Report provides summary documentation of the raw data, including but not limited to the date of the experiment and the wavelength of light used. This document demonstrates that I conceived of my invention and reduced my invention to practice prior to May 25, 2001. For example, page 21 of the Drug Screening Report includes a chart that demonstrates the results of experiments conducted on February 7, 2000 using 532 nm wavelengths of light.

From at least February 7, 2000, I diligently worked on reducing my invention to practice, at least through and until I submitted Application Serial No. 09/871,441 on May 31, 2001. As evidence that I diligently worked on reducing my invention to practice, Exhibit 1 documents approximately 630 experiments that were conducted at my direction and under my control between February 7, 2000 and June 14, 2001, using wavelengths of light between 413 and 610 nm.

I, Steven J. Rychnovsky, hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under

Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.
